NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

▼ Import NumPy as np

```
import numpy as np
```

Create an array of 10 zeros

```
zeros = np.zeros(10)
zeros
array([0., 0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

Create an array of 10 ones

```
ones = np.ones(10)
ones
array([1., 1., 1., 1., 1., 1., 1., 1., 1.])
```

▼ Create an array of 10 fives

```
fives = np.full(10, 5.)
fives
    array([5., 5., 5., 5., 5., 5., 5., 5., 5.])
```

▼ Create an array of the integers from 10 to 50

▼ Create an array of all the even integers from 10 to 50

▼ Create a 3x3 matrix with values ranging from 0 to 8

▼ Create a 3x3 identity matrix

```
identity_matrix = np.eye(3)
identity_matrix
```

```
array([[1., 0., 0.],
[0., 1., 0.],
[0., 0., 1.]])
```

▼ Use NumPy to generate a random number between 0 and 1

```
random_number = np.random.rand()
random_number
    0.8808764210495326
```

▼ Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

Create the following matrix:

▼ Create an array of 20 linearly spaced points between 0 and 1:

Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
output = mat[2:,1:]
output
     array([[12, 13, 14, 15],
            [17, 18, 19, 20],
            [22, 23, 24, 25]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
element_at_row_3_column_4 = mat[3, 4]
element_at_row_3_column_4
     20
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
new_mat = mat[:3, [1]]
new_mat
     array([[ 2],
            [7],
            [12]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
new_mat = mat[-1,:]
new_mat
     array([21, 22, 23, 24, 25])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
last_two_rows_and_last_column = mat[-2:,:]
last_two_rows_and_last_column
     array([[16, 17, 18, 19, 20],
            [21, 22, 23, 24, 25]])
```

- Now do the following
- Get the sum of all the values in mat

```
sum_of_all_values = np.sum(mat)
sum_of_all_values
325
```

▼ Get the standard deviation of the values in mat

```
standard_deviation = np.std(mat)
standard_deviation
7.211102550927978
```

▼ Get the sum of all the columns in mat

```
sum_of_all_columns = np.sum(mat, axis=0)
sum_of_all_columns
array([55, 60, 65, 70, 75])
```
